

Fiber Armchair Wood Base

The Fiber Armchair is made from an innovative material with up to 25% wood fiber. The fibers become visible when viewed up-close, giving it a contemporary character and unique texture. When viewed from afar, the fibers disappear into the sleek shape of the shell. The chair's wood base creates a sturdy and timeless silhouette that fits beautifully into any home, office, restaurant or public space. Shell consists of an innovative composition with plastic and up to 25% wood fibers. The wood fiber and plastic blend is injected into the mold, forming the chair's shell. Wood base is cut from solid oak wood and wet lacquered.
